

Nuendo 5.1.1 – version history

The following issues have been fixed in version 5.1.1. Make sure to read this document before contacting Steinberg support.

Area	Title
OMF	OMF: Wrong clip positions on import from Apple Final Cut Pro.
OMF	OMF from Nuendo in some cases couldn't be imported to Pro Tools
OMF	OMF: import failed when referenced files used language-specific special characters.
AAF	AAF: Import from Avid Mediacomposer: Some clips referenced wrong audio files.
AAF	AAF: Import from Avid Mediacomposer: Some clips had wrong offsets.
Editing Functions	Clip Packages created from "VST Sound" archive resulted in silent clips on import.
Editing Functions	Pool - Process Audio - Remove DC Offset failed when applied to multiple files at once.
Editing Functions	Insert silence command failed when the range was only a few frames long.
Editing Functions	Copying range selections did not always maintain the exact position.
Editing Functions	Network Collaboration: Grid definition changes were not transferred.
Editing Functions	Pool: Renaming clips and emptying trash took a long time to complete.
Editing Functions	"Automation follows event" didn't work when event was moved by [ctrl] + [Arrow] shortcut.
Editing Functions	Track Delay in milliseconds was applied doubled.
Editing Functions	"Snap point to cursor" acted slow with range tool + edit mode.
Editing Functions	Scissor Tool was not working correctly on MIDI parts inside folder tracks.
GUI	Jerky cursor on second monitor fixed.
GUI	Mouse Cursor sometimes shows wrong icon (Mac only).
GUI	After loading a foreign project, the play cursor was out of sync.
Media Management	Network Collaboration - crash fixed for MIDI tracks.
Media Management	Network Collaboration - Audio/Bounce Selection did not copy media files.
Media Management	Network Collaboration - transferred files sometimes got corrupted.
Media Management	Audio CD import sometimes crashed.
Media Management	MediaBay - all drives were scanned unintentionally.
Media Management	Pool - Crash when emptying the trash fixed.
Media Management	VST Preset Browser window was corrupt in some cases.
Media Management	MediaBay column setup was not remembered
Media Management	Sometimes audio files were unintentionally erased from pool.
Media Management	MediaBay scan disabled Autosave.
Transport / Timeline / Sync	Playback start was often inaccurate.
Transport / Timeline / Sync	Export Markers to CSV with project offset was not correct at 23.98 fps.
Video	Y-channel (Red) was missing from Apple Jpeg Codec (through a Blackmagic card).
Video	Some h264 coded videos could not properly be imported.
Video	Heavy GUI activity and Stationary Cursor caused video picture to stutter.
Video	Jerky playback over Blackmagic and AJA video cards fixed.
Video	Picture aspect ratio was incorrect with some video files.
Video	Jerky playback over firewire DV converters fixed.
VST / Plugins / Audio Engine	Crash when loading a project using TC Powercore plugins when hardware is not present - fixed.
VST / Plugins / Audio Engine	Crash when previewing plug-in as offline process - fixed.

VST / Plugins / Audio Engine	Cut Routing for a "mono to stereo" plugin was not saved.
VST / Plugins / Audio Engine	Postfilter forgot slope setting.
VST / Plugins / Audio Engine	Duplicate Tracks+ alt+shift removed plug-in.
VST / Plugins / Audio Engine	Possible VSTBridge crash fixed.
VST / Plugins / Audio Engine	MediaBay did not show RoomWorks / RoomWorks SE presets.
VST / Plugins / Audio Engine	MixerDelay plugin always overwrote existing automation.
VST / Plugins / Audio Engine	Link-state of mixer channels gets lost using the mouse-wheel to adjust fader.
VST / Plugins / Audio Engine	Host-synced plug-ins sometimes went out if sync
System and Connectivity	Potential crash after some minutes "without reason" fixed.
